

Dear Sirs, the information available from XM Satellite Radio is of great value to me as my travel takes me distances where is it not practical to rely on normal non satellite radio transmissions. The convenience and the services that XM Satellite Radio provides to me (which my payment to them supports) are an important benefit that should not be put aside because of the position of the National Association of Broadcasters. The commercial free broadcasts and the range of information that is provided by XM radio makes for a product that gives the consumer the worthwhile and needed quality that is not found elsewhere on radio. Please consider the overriding interests of the listening public and reject NAB petition 04-160. Thank you for your consideration.
